1. Brainstorming & Ideation Phase

COMIC CRAFT – AI COMIC STORY USING GEMINI MODEL

• Project Title: COMIC CRAFT – AI COMIC STORY USING GEMINI MODEL.

• Project Idea: Comic Craft is an AI-based application that helps users turn a story idea or prompt into a structured comic-story experience using Google Gemini models.

• Problem Statement: Creating a complete comic manually requires story planning, scene development, dialogue writing, character descriptions, and visual planning. Beginners may find these steps difficult and time-consuming.

• Proposed Solution: Provide a simple interface where a user supplies a story idea and the application uses Generative AI to develop a comic-style story with scenes, characters, dialogue, and visual descriptions.

• Core Objectives: Generate creative comic stories from user prompts; organize stories into scenes or panels; use Gemini for intelligent story generation; make the process simple for users; and provide an easy-to-understand output.

• Expected Outcome: A working AI comic-story application that converts a user's idea into a structured comic narrative.
