2. Requirement Analysis Phase

COMIC CRAFT – AI COMIC STORY USING GEMINI MODEL

• Functional Requirements: Accept a story prompt; process the prompt using Gemini; generate a comic story; create scene/panel descriptions; generate character and dialogue content; display the generated result; and allow the user to review or regenerate content.

• User Requirements: A simple input area, a generate action, clear generated output, readable scene organization, and useful feedback when input or AI processing fails.

• AI Requirements: Access to a Google Gemini model through an API configuration. The application should keep API credentials outside the source code.

• Software Requirements: A suitable programming environment, Google Gemini API access, web/application framework and libraries used by the selected Comic Craft implementation, and a modern web browser.

• Non-Functional Requirements: Usability, maintainability, reliable error handling, reasonable response time, clear output formatting, and secure handling of API credentials.

• Input and Output: Input is a user's story idea, theme, characters, or instructions. Output is an AI-generated comic story organized into scenes/panels with narrative and dialogue information.
