7. Project Documentation Phase

COMIC CRAFT – AI COMIC STORY USING GEMINI MODEL

• Documentation Contents: Project introduction, problem statement, objectives, requirement analysis, system design, architecture, modules, implementation, testing, setup instructions, usage instructions, limitations, and future enhancements.

• Setup Documentation: Explain the required runtime, dependency installation, environment-variable configuration, and application startup procedure based on the actual project implementation.

• API Configuration: Explain where the Google Gemini API configuration belongs without placing the actual secret key in the documentation.

• User Guide: Enter a comic-story idea, submit the request, wait for AI generation, review the generated scenes and dialogue, and regenerate when a different result is needed.

• Maintenance Documentation: Keep dependencies updated, monitor API usage, maintain prompt templates, test changes, and keep repository history organized.
