8. Project Demonstration Phase

COMIC CRAFT – AI COMIC STORY USING GEMINI MODEL

• Demonstration Flow: Introduce Comic Craft → explain the problem → show the application → enter a sample comic idea → generate the story with Gemini → show the title/characters/scenes/dialogue → explain the AI workflow → show error handling/testing → explain future enhancements.

• Demonstration Materials: Project PDF, presentation slides, application screenshots, live application walkthrough where available, source repository, and testing evidence.

• Key Features to Demonstrate: Prompt-based story creation, Gemini integration, structured comic scenes, character/dialogue generation, readable output, and regeneration or error handling where implemented.

• Technical Explanation: Explain how the user request travels through the application, how the prompt is sent to Gemini, how the response is processed, and how the comic story is presented.

• Future Enhancements: Character consistency, generated comic-panel images, downloadable comic pages, multiple visual styles, story editing, multilingual support, user accounts, and deployment improvements.

• Submission Note: Student name, college, course, year, team information, and any other personal project fields can be inserted later. Marks, percentages, grades, and evaluation scores are intentionally excluded.
